Read before you use these figures

1. A hospital price is not a personal quote. What a patient pays depends on the plan, the deductible, the doctor's fee and the services actually given.
2. A blank cell means the source published no value. It is never zero.
3. A doctor score predicts the result at the affiliated hospitals. It does not measure the doctor's own skill. Two doctors at the same hospitals get the same score.
4. CMS star ratings and comparisons describe the hospital's Medicare cohorts for the published period.
5. Price files, CMS files and the doctor scores have different dates. Each section names its own.
6. CMS does not endorse OpenHealth or this report. Report a wrong figure at https://getopenhealth.org/corrections.

OpenHealth, getopenhealth.org. Public records, not medical advice. Patients never pay for OpenHealth. No rating, placement or badge is for sale. Buying this report changes no rating or order on the site.
